

Specifications:

Name: ULTRA EVA

Color: Silver and Black

Type: Sound + Vapor Barrier

Construction: Ethylene Vinyl Acetate

High Density Foam & 0.015mm Foil
Barrier Film

Coverage: Approximately 200sqft.

Overall Thickness: 3mm

Weight per Roll: 13 lbs.

Subfloor Compatibility: All Types

Floor Compatibility: Eco-Engineered
Composite & Laminate

Installation Method: Floating

Recommended Usage: Residential &
Light Commercial

STC (Sound Transmission Class): 63

IIC (Impact Insulation Class): 60

Density: 110kg/m³

Nominal Roll Width: 10in.

Nominal Roll Height: 40in.

This product, when properly installed and used under normal conditions, is warranted to remain resilient and functional for a period equal to the warranted life of selected Ecoessent Floors and Eternity Flooring.

The EssentialLAY Ultra EVA underlayment provides superb sound and moisture/vapor protection. The Ultra EVA underlayment will absorb minor imperfections in the sub-floor, giving your Eco-Engineered Composite or Laminate floors a smooth, even surface to float upon.

Installation:

1. **Prepare the Subfloor.** Level, repair, and make sure it is free of debris
2. **Begin the first row.** Place the roll on the ground with the film side down (facing the subfloor).
Note: the overlap of film should be positioned toward the open room and the foam will face the wall.
3. **Measure and cut accordingly.** The plank width will determine how many rows of flooring you will be able to install. When you reach 1ft away from the underlayment, stop and roll out a second row of underlayment.
4. **Begin the second row.** Unroll, measure, and cut. Place the foam side over the top of the film overlap from the previous row. Butt the edges together to create a nice seam, do not overlap.
5. **Tape the Seams.** Use industrial tape to adhere the seams together to make a flat & even surface
6. **Finish.** Continue installation in sections by repeating the steps above.
